Mines and Prospects--Furnaces and Mills

Hooked Up Engine on Newhouse Line

Representative of the Manufactory Puts New Machine Through a Course of Sprouts.

The Shay locomotive, with which the output of the Newhouse mines in Beaver county is to be whisked over the road to the concentrator, is now on the rails and ready to go into action whenever the signal is given, said G. B. Kittle, special representative of the locomotive works at Lima, O., yesterday. The machine, which weighs sixty-five tons, has been tried out by him to the satisfaction of the management, and withou effort whatever moves up a grade of per cent or greater. Of this variety of locomotives, said Mr. Kittle, who goes to Chili from this State, there are no fewer than eight now in operation here, and while the aerial tramway as a means of transportation is preferred by some, he favors the locomotive as the more reliable means for the transportation of large tonnage. The machine on the Newhouse road is sup-plied at a cost of \$10,000. The ore cars will follow in a short time. Through the local yards a large amount of ma-terial for the equipment at Newhouse continues to pass, and with the outlook for the plant's completion as scheduled the management is very much pleased. In the driving of the long tunnel good progress is being made, while every condition is now favorable to the pro-duction of concentrates around the first of the year.

GALENA TRAMWAY.

Line to Be Completed by Management

The new tramway, over which the output of the Galena mines at Bingham is to pass on its way to the lead furnaces of the United States smelter, will be completed next month, said Chief Engineer Lyon, during the day. To that end all material is now upon the ground, while the towers are going up with the foundation for the headhouse being constructed. The length of the trainway, which will extend from the Galena shaft to the headhouse or the Galena shaft to the headhouse on the Old Jordan division, is exactly 1656 feet, and with this equipment the ores from the Galena will pass direct from the group to the main line.

Coal Find on the Virgin.

CALIENTE, Sept. 29.—Samples of coal found south of Virgin river by McIntire and Forrest, were brought in today. These men located four claims on a forty-three-foot body of what they claim is the first coal ever found in southern Nevada. They are taking there camples to Sait Lake for tests as to their value as combustibles, and will try to enlist capital for prospecting their find.

UTAH AT GOLDFIELD.

Salt Lake Colony in the Nevada Camp Rapidly Growing. In its story of the week at Goldfield and

neighboring camps, the News reports a discovery of ore in Gold Crater district which shows a valuation of \$654 per ton.

discovery of ore in Gold Crater district which shows a valuation of \$54 per ton, of which valuation \$524 is in gold. Among those prominently interested in the new camp, twenty-six miles east of Goldfield, is Dick Colburn and his associates in the brokerage business.

Goldfield is attracting considerable attention in Sait Lake, and her business men are sending representatives here every day, while the mining men are coming themselves to prove the truth of the marvelous stories they hear. Among those we have noticed to date are W. H. Clark, J. T. McHugh, Isaac Hazedrove, Mike Hennessey, Pat Mulrooney, Mr. Bedford, Henry Miles and A. H. Mayne.

At a point 30 feet west of the Goldfield Great Rend Mining company's heline shaft, ore of shipping value has been encountered. Late returns from samples taken in a surface cut at that point give values of \$172.99 and \$240.80 per ton, and further work to determine its extent along the strike of the vein is in progress.

A new shaft will be put down on the Red Top to a depth of 150 feet. In the face of the crooscut \$49 ore is being taken out. This can be screened to \$300 stuff and Red Top will soon be added to the list of shippiers.

The Garuner, Oddie and Duffield lease on the Kendail claim, generally referred to as the Sandstorm, brings forth another sensational strike this week. In an open cut thirty feet west of the older workings a juncture of two cross veins was found. At this point an ore chuie twelve to fourteen inches wide has been exposed that carries phenomenal values. Repeated pannings have been made that indicate values ranging from \$50,000 to \$50,000 per ton. Development has proved the chute to be three feet long.

St. Ives comes forward this week with one of the biggest strikes, from all reports, in the history of the camp. In the drift which is being run on the ledge in the Johun lease an ore body was encountered from which first samplings gave an average assay of \$1300. The day the strike was made sixty-two sacks of this quality of stuff was taken out. The wh

ALICE ZINC ORES.

Preparing to Reduce Large Volume in

Northern Properties. Separators with which to reduce the rincose product of the Alice mines at Walkerville, Mont., are to be added to their equipment and the zine ores and tailings made to add to the future earnings of a bonanza that has been so liberal in its treatment of the Messrs. Watker of this city and their associates. To this end W. G. Swart, representing the Blake separator, has been conducting a series of experiments, with results that are quite satisfactory, and is now conferring with the officials of the company in Sait Lake City. The method is an inexpensive one, as is the equipment, and it is claimed that with the machine the Alice may be restored to its old place among the bread-winners. The method is being successfully employed in a number of Western camps, and Mr. Swart has no doubt of results at the Alice mines. their equipment and the zine ores and

Advanced Prices Bring Out Another Shower of May Day.

The day on the mining exchange closed n the sale of 30,975 shares of stocks for \$4561.74 and with May Day again the pacemaker. Opening at 10% cents, and pacemaker. Opening at 10% cents, and with all kinds of orders abroad, it moved without a wobble to 10%, at which the short showed his hand and it receded a point or two. Daily West did some business on the open board, as did Victoria, which came out to a bid of \$1.01%, while Naildriver flattened out to 10 cents, not withstanding the lustre with which it at one period shone in the park. Uncle Sam was dealt in lightly around 20 cents and Sacramento at 13% cents, while 31 cents was bid for Consolidated Mercur, which proved a light wad around 35 cents. Mammoth advanced to \$1.55 bid around the close, while 52 was bid for the King, which declined to set a price on its holdings. The Tonopah list was again neglected, with Montana refusing to budge at less than \$2, while \$8 was bid for the senior Tonopah, the day closing on the following market:

Dull Market in Boston.

Special to The Tribune. Special to The Tribune.

BOSTON, Mass., Sept. 22.—The opening of the local market displayed a sagging tendency and as the morning advanced trading became dull. There was nothing that could be classed in the line of specialties except Granby, which was largely traded in. A reduced amount of buying orders and the early weakness in Amalgameted caused the dullness, but the coperated caused the dullness, but the copmated caused the dullness, but the cop-pers still show that they are in a strong position and higher prices are confidently predicted. The closing was irregular, Hornblower & Weeks, brokers, 53 State street, Hoston, and 16 Wall street, New York, furnish the following quotations:

OPERATIONS AT OVERLAND.

Second Clean-Up to Be Made at Mill in Few Days.

Arrivals from Sunshine report the Overland mill still in commission, and while the management has not divulged the results of the recent shipment of gold dust from the plant, it is known that a very satisfactory margin was earned notwithstanding the indifferent quality of the ores on which the initial run was made. However, the ore is occurring in very large volume and dividends have been and are being earned from rock of even less value. A second clean-up will be made in a few days, when something more definite concerning the future of the undertaking will have been developed.

The Yampa's Matte Goes to the U. S.

Product of Its Furnaces to Be Reduced at Works of Neighboring Company in Valley.

For two years at least the copper, gold and sliver-bearing matte from the furnaces of the Yampa smelter in Bingham canyon will be forwarded to the convertors of the United States smelter in the valley, this under an agreement which has just been entered into by the principals. Over the contract there has been considerable rivalry. The product, running high up in iron as well as copper, with characteristic values in gold and eliver, is a most desirable one, and as a flux is unexcelled. Even the big plants at Butte have been bidders for it, but the tariff on the long haul made it impossible for them to compete suc-cessfully. With a second furnace, for which orders have been placed by the management, the output of matte at the Yampa will have been increased to forty tone daily, the new devices on which the management has decided enabling it to regulate the grade as the market may desire, while with the in-stallation of a reverbatory furnace the product will have approached to within one degree the pig product of the valley

Meanwhile the bins of the United States company's lead smelter are rapidly filling with lead ores, and construction there indicates that the lead blasts will be ready to go into commission as has been scheduled.

UTAH AND BOSTON CON.

Some Comment on the Properties in a Boston Letter.

Utah is probably as well thought of as any copper stock listed in Boston, for it is known to be earning better than \$4 per share upon its 200,000 shares of stock, and it is reported will pay a dividend crease from a \$3 to a \$4 annual basis, writes Hayden, Stone & Co. of Boston. Some of the Boston interests would like to have the mine opened up to a greater extent than at present, although they have no fear but what the Utah prop-

have no fear but what the Utah property will continue its present rate of production and profits for some years to come. It keeps a reserve of 1,000,000 tons of are epened up, on which it places the average value at \$7 per ton, a total value of \$7,000,000, and adding \$1,000,000 for equipment, etc. gives actual cash value in sight of \$8,000,000, or slightly under 70 per cent of the selling price of the stock in the market.

The Boston Consolidated from its shipment of about 7000 tons of ore per month to the Bingham smelter is deriving net profits of about \$20,000 per month. In making these shipments it selects its rock so as to average 3 per cent copper or better. A considerable portion of Boston Consolidated stock is held abroad and as some of this foreign stock is weakly held, it comes on the Boston market whenever the price strengthess. This weakens the position of the stock speculatively, but this foreign stock has been gradually absorbed here, and it will probably only be a question of months before the management of the property is brought over to the United States as was done in the case of the Utah company. It took a year and a half to accomplish this change for the Utah comcany. It took a year and a half to ac-complish this change for the Utah com-

Cyanide and Sulphides.

Cyanide and Sulphides.

It is known that dilute cyanide solutions have a direct effect on many sulphides. Experiments have shown that chalcopytic, when finely crushed and treated with a @ per cent solution, will within an hour yield a portion of the copper to the solution, says the press of San Francisco.

Copper glance acts in much the same manner, copper being present in the solution in the form of cyanide. Covellic, a subsulphide of copper, is attacked even more readily than the sulphides, a sulphocyanide of copper are attacked freely stibnite antimony sulphide) is affected by cyanide and is one of the most objectionable of minerals in cyanide treatment. Some chemists assert that, if first iteated with a solution of sodium sulphide, the antimony will be dissolved and carried away in the wash water. A part of the sulphur of stibnite has a tendency to combine with the potassium of the potassium cyanide, forming sulphide of potassium, the remainder of the sulphur forming, with the cyanogen, sulphocyanogen, Galena (lend sulphure) is attacked slowly by cyanide solutions, but its sulphur forms sulphocyanogen, zinc blende is not materially affected, but the experiment of placing a strip of bright silver much of placing as the silver was blackened. First is scarcely if at all, affected by cyanide solutions.

WILD BILL TO START.

Dump Ores to Be Made to Provide Sinews for Development.

The Wild Bill group out of Milford, which was at one period productive of a considerable tonnage of ore of good quality and which is now the property of the Chicago Mining company, is to be put into action again, the ores now on its dump to be made to supply the means with which to explore the ledge at greater depth. This ore was allowed to accumulate, said an officer of the company, at a period when transportation and working charges at the smelter were such as to prohibit the marketing of it, although it contained from 15 to 18 per cent lead, as many ounces silve and about \$3 gold, with an excess of 40 per cent from. It is the latter metal that commends it to the furnaces at this time and which will earn for the company a good margin. The intention is to drop another 100 feet on the ledge and to open it up systematically, ore running well up in silver and lead being now exposed below.

Mines of Ophir to Have an Outlet

Product of Old Camp to Come to Market Over a Branch of the San Pedro Railway.

The interests of Senator Clark and

of Stockton are to be provided with an all-rall outlet, said an official of the San Pedro rallway during the day, and to that end an order to begin construction is expected at any hour. The branch has been projected for some time, according to a local representative of Senator Clark whose mines in that locality are contributing as much if not more to the San Fedro's Stock-ton division than are any others, and that construction was not inaugurated during the summer was that the owner of the properties himself did not press it. As another source of revenue at this time is the old Buckhorn group of mines whose ore bodies are as endur-ing, perhaps, as are those of the Ophir Hill, and with development progress-ing on a number of others, it is said that the management of the San Pedro

feels that it is justified in extending its rail into the region. The old camp was at one period a most productive one, and with the stimulus that transportation will afford should be able to repeat the history of earlier days. In the Buckhorn especially large amounts of ore of good milling quality were permitted to remain while more or less ore of similar quality is exposed in neighboring properties. It is under-stood that data now before the San Pedro convinces it that the tonnage from the Buckhorn will be fully as large as that of the Clark interests.

TO PUT UP PLANT.

Uranium Ore Pays All Expenses of Shipment to Niagara.

BASIN, La Sal Mountains, Sept. 29,-John Welsh, one of the owners of the Welsh-Lofftus uranium-radium mines, came up from the valley yesterday and reports that the Lockwood experimental plant at Niagara, N Y., has been perfected far enough to save all the ordinary values of the ore and also the uranium and vanadium contents, and that

uranium and vanadium contents, and that they will be prepared to put up a plant here at the new town of Radium next soring.

Mr. Welsh produced the letter from Stephen A. Lockwood of Buffalo, N. Y., in which the latter specifically writes:

"The last carload of ore sent me gives returns in full of \$550, gold, silver, copper, uranium and vanadium. The uranium ore alone pays for the expense of shipment; the vanadium values were far beyond my expectations, and the ordinary minerals about the same as previous shipments. After carefully assorting and classifying the ore from the yellow, the purple ore ran \$1400 per ton, two separate tons. This is the vanadium ore. It is worth \$10 a pound, and in great demand, especially at the steel works of Ernest Krupp. Hamburg-Elibeck, Denmark, where arrangements are to be made for future shipments. Get out another carload as soon as possible and ship as before."

On the Grouse Mountain tunnel last Saturday night's shift was fortunate in cutting into the big iron-porphyry vein, far which they have been so patiently driving the cross-cut for the past year. The one indicates high values in gold. The tunnel has reached a depth of 250 feet, and it is said that so far they have more than ten feet of vein matter, and possibly ten feet more before they reach the hanging wall. There is a slumbering opinion here that the Denver expert who recently visited the property made an unfavorable report on the property and that the company had concluded to close down operations for the present. The indications now are that the expert will be turned down' and work pushed ahead more vigorously than before.

Capt. William Hayes, accompanied by

Capt. William Hayes, accompanied by Charles Reagan, an experienced mill man from the Butterfly-Terrible mine, near Telluride, arrived in camp vesterday. Capt. Hayes is one of the Wilson Mesa bonanza chasets, and Mr. Reagan is here negotiating for a lease on the Basin stamp mill, which, if favorable, he will at once arrange for starting it un, and the addition of a Wolfley tackle and cyanide tanks to the present five-stamp mill. He is much pleased with the district and hones to get the privilege of working the Tornado, M. Y. F. Anaconda and Grante Mountain ores. He will soon go to Salt Lake after additional machinery. Capt. William Hayes, accompanied by

Some of the riches free gold ores ever found in the camp are taken from the old workings of the Tornado property, and it seems that there is no end to its quantity. Manager Fowler is pushing work ahead as fast as possible to ascertain the extent of the deposit. Largent and Black of Salt Lake are the leading members of the Tornado Mining and Milling company. Milling company.

SOLD CLAIM FOR \$2000.

Ore Assays at \$72 Taken From Three and a Half-Foot Ledge.

inscial to The Tribune. CALIENTE, Nev., Sept. 29 .- John Marvin, half owner of the Melly G. free gold cialm on the Virgin river, sold his interest today to F. G. Builard of Pueblo, Colo., for \$2000 cash. The ore assays \$72.40 tak-en from a three and a half foot ledge at a depth of 120 feet.

John Foley, half owner of the Dolly Varden group of gold-copper claims south of Los Vegas, sent a sample sack of very rich copper giance ore through to Sait Lake today for assay. There are twelve claims in the group and nearly 200 feet

TEA

Buy tea by the ounce till you get Schilling's Best; it makes no difference then.

Write for our Knowledge Book, A Schilling & migney, Sea Francisco.

Charles Laycroft, a prominent mine owner of Rossland, B C, and director of the Le Roi Mining company, passed through camp today, accompanied by Dion J Mulvey, his expert, on their way to Meapa. They will go from that camp north about 149 miles to the Jupiter group of gold claims in Death valley, which were located in August by Miles and Finney on a trip which so nearly caused Finney his eyesight. Samples of the ore sent to Rossland assayed \$12.00 free gold and it is said that they have nearly three feet of this one. The claims are seventy miles from water and wood and it has not yet been decided how they can be worked to profit.

Dorton and Wilson, owners of the Day-

Dorton and Wilson, owners of the Day-light group of silver claims north of Callente, who cut a seven-foot ledge of high grade ore last month, have just re-ceived assays of 189 ounces silver and 19 per cent lead from samples sent to Sait Lake for assay.

Drake, Fisher and Cantrell, owners of the Block Rock mine northwest of Call-ente, struck a tich body of lead carbe-nates last week and expect to make early shipment of a carload to Salt Lake. neighboring ones in Ophir canyon out

shipment of a carload to Salt Lake.

John Watson, one of the original locators of the now famous United Vertice mine in Arizona, has just made a strike on the upper Colorado fiver in the Big Four group. He is in camp today with several sacks of ore showing coarse gold which will go at least 250 a ton, and says that he has stripped a three-foot iedge nearly 150 feet showing the same character of ore. He is backed by Utah and Arizona capital and expects to have ground broken for a big mill before the beginning of the new year.

Mining Notes.

Mining Notes.

Andrew Mayberry, superintendent of the United States Mining company's properties at Bingham, was strong yesterday's arrivals from camp. While fonce in more conversant with its resources and the enormity of the camp's ore bodies. Mr. Mayberry confesses that it is with difficulty sometines that it reconcibes himself to the knowledge that the output of a month at present in nearly louble the output of the entire year prefered to the camp's exploitation as a samp of copper.

Alex Colbata, superintendent of the

Alex Colbath, superintendent of the luncy of Alta left for camp again yes-

terday morning. A communication from Callente on the line of the San Pedro railway, says it is the intention of its enterprising citizens to collect a mining exhibit that shall reflect the resources of that region. Fred T. McGurrin will leave for Mil-ford tonight.

Charley Brown is conducting an exam-nation of mining properties in Bullion mayon. Beaver county, for himself and ocal interests.

Otto Stalmann, general manager of the Glasgow & Western Exploration company's mines and reduction works in Nevada, has gone to Golconda, where the atter are located, to inquire into the behavior of the new separators.

The management of the Tetro of Tintle at the sampler with another lot of liver and lead ore

Ciarence E. Allen, superintendent of the Centennial-Eureka, left for that Tintic property again has night.

Lawrence Greene and others will leave for Alta this morning to make an examination of properties.

hation of properties.

A report was freely circulated last night that the pump at the New York of Park City had been disabled and that the water was threatening serious trou-

Ben Sprenger, for several years a prom-ment figure on brokers row and in the mining exchange, his returned to town after an absence of twelve months and s being cerdially received by old friends.

George Moore of the Moore limes pro-cess is in New York City.

Frank G. Janney, superintendent of the Utah Copper company's Bingham inter-cests, left for camp during the afternoon after a few hours with the management. The final payment on the interests of O'Reilly, Dignowity and Smith in the Highland Boy Cen. of Bingham will be made by the Apex company next month. Frank R. McNamee has gone to De amar. Nev. again after a visit with the fficials of the big gold mines over there.
